PROFESSIONAL SUMMARY

Senior Frontend Developer with 7+ years of professional experience working with React and TypeScript. Take ownership of frontend development from requirements clarification through implementation and release. Propose and justify technical solutions, contributing to architectural and product decisions. Identify weaknesses in frontend applications, resolve existing issues, and address potential causes of errors. Collaborate with UX/UI designers, analysts, product managers, QA engineers, and other teams. Optimize performance and write unit and end-to-end tests. Improve team engineering practices and contribute to shared technical solutions. Break down tasks into clear steps, share expertise, support colleagues with technical challenges, and mentor frontend developers. Use AI tools to improve delivery speed and quality.

TECHNICAL SKILLS

Frontend: HTML, JavaScript (ES6+), TypeScript, React, Next.js, Vue.js, Nuxt, Core Web Vitals

Styling: CSS, SCSS, adaptive and responsive layouts, Tailwind CSS, Sass, Styled Components

Data Fetching and State Management: Apollo GraphQL, REST APIs, TanStack Query, Redux, WebSockets

Architecture and Build Tools: Microfrontends (Webpack Module Federation), Feature-Sliced Design (FSD), Webpack, Vite

Testing: Cypress, Jest, Playwright, Selenium

Development Tools: Git, Sentry, CI/CD, Storybook, ESLint, Docker, Linux

Additional Technologies and Methodologies: Node.js, Python, SQL, Agile / Scrum

AI-Assisted Development: Codex, Claude Code

PROFESSIONAL EXPERIENCE

Raiffeisen Bank | Senior Frontend Developer

February 2021 - March 2026

A universal bank serving retail and corporate clients, part of Raiffeisen Bank International.

- Owned the frontend integration of CryptoPro for document signing, from requirements definition through release and ongoing support. **More than 20,000 clients** used the integration to sign documents and submit them to the tax authority.
- Migrated the application to an independently deployable microfrontend architecture, moved it into a separate repository, and established a new CI/CD pipeline. **Reduced build time by 67%** and eliminated the need for cross-team release coordination.
- Identified the causes of excessive bundle size, upgraded Webpack from version 4 to 5, and configured tree shaking and code splitting, **reducing the initial JavaScript bundle size by 44%**.
- Proposed, justified, and implemented a single entry point for two related products by integrating another team's microfrontend. Aligned the technical approach across teams while preserving separate repositories, tooling, and development standards.
- Owned the development and modernization of the tax planning service's frontend: adapted it to changes in tax requirements, replaced legacy code, and improved performance. Collaborated with backend developers on calculation logic.
- Improved the bank-wide design system of reusable components and added unit tests using Jest.
- Conducted code reviews, mentored developers, and helped colleagues tackle complex tasks.
- Contributed to team technical decisions and aligned implementation approaches directly with product managers, backend developers, designers, and QA engineers.

Technologies: React, TypeScript, Webpack, Cypress, CryptoPro, openapi-typescript, TanStack Query

Intrepid Fox | Frontend Developer, Part-Time

July 2024 - June 2025

An AI-powered platform for company verification and business onboarding.

- Proposed UX improvements and implemented an updated KYB onboarding flow, increasing the completion rate **from 13% to 26%**.
- Standardized the theming system for embedded onboarding used by **eight partners**. Separated theme-specific styles from shared Tailwind CSS classes and fixed layout, sizing, and scrolling issues across iframes of different sizes.
- Owned the frontend integration of **Microsoft Entra ID for authentication and authorization**, from initial setup through production release.
- Designed the technical implementation and developed an administrative KYB reporting interface, including tables for large datasets and interactive Canvas visualizations of relationships between companies.

Technologies: Vue.js, Nuxt, Tailwind CSS, Microsoft Entra ID, Zod

Mel.fm | Frontend Developer

July 2019 - November 2020

A digital media platform focused on education and family life.

- Built AMP versions of existing pages, **reducing mobile page load times by 47%**, as measured by product analytics.
- Implemented server-side GraphQL resolvers on top of existing REST APIs, supporting a migration that **increased the share of frontend requests handled through GraphQL from 43% to 100%**.
- Migrated legacy frontend code from Google Closure Library to React as part of the project's modernization.

Technologies: React, TypeScript, GraphQL, Google Closure Library, Google AMP

Aventica | QA Engineer

July 2018 - July 2019

A digital development agency providing research, design, and software development for large companies.

- Took the initiative to **automate 89% of test cases using Python and Selenium** while also handling manual testing tasks.

EDUCATION

Russian University of Transport, Moscow

Bachelor's Degree, Computer Systems Maintenance | 2014-2018

LANGUAGES

English: Fluent | **Russian:** Native
